Summary

Senior researcher with 8 years designing and executing research strategies at global organizations including Meta, Microsoft, and JPMorgan Chase. Expert in translating complex behavioral data into actionable executive insights, designing scalable infrastructure, and measuring impact through data-driven frameworks. Proven track record partnering with senior stakeholders to accelerate innovation across Fortune 50 enterprises.

Education

- **University of Pennsylvania** MS in Statistics & Measurement, 2018
- **Pennsylvania State University** BS in Business, 2017

Experience

- **Founding Researcher** Remote
  Stealth Startup *October 2025 - Present*
  - Architected the research strategy and validity frameworks for a 0-1 civic advocacy platform utilizing blockchain digital IDs, guiding platform development, addressing user concerns and driving pilot deployments in NY and CA to successfully onboard hundreds of verified users.
  - Served as the product catalyst on a 3-person core team, translating behavioral insights directly into technical protocols and UI specs alongside engineering and design to accelerate feature development.
  - Diagnosed critical privacy and safety barriers surrounding platform onboarding, implementing user-facing cryptographic explanations and transparent onboarding that built user trust and drove funnel conversion.

- **Senior UX Researcher (Contractor)** January 2023 - October 2025

  Meta, Business Messaging Team *June 2024 - October 2025*
  - Executed mixed-methods research (behavioral log analysis, interviews, surveys) across Meta's SMB advertising suite, diagnosing and eliminating barriers to liquidity within automated campaign workflows to increase self-serve adoption and merchant ad-spend retention.
  - Architected and managed continuous, ecosystem-wide global tracking studies (n=100,000+/month) combining attitudinal survey data with behavioral patterns and qualitative user interviews to monitor sentiment and inform product strategy across Facebook, Instagram and Whatsapp.
  - Conducted multinational research on 0-1 agentic AI Business Messaging solution, using controlled experiments to define the strict quantitative thresholds that gated global Beta and GA launch decisions.
  - Directed 12 external vendors to scale international research operations, managing high-volume moderated testing, localization, and qualitative interviews across 8 countries to accelerate product insight delivery.

  Citi Bank, Business Insights Team *October 2023 - May 2024*
  - Architected comprehensive data governance framework for analytics infrastructure across 6 institutional platforms serving 100k+ users, standardizing taxonomy to enable scalable measurement and insights.

  Microsoft, Employee Experience Team *January 2023 - September 2023*
  - Designed and managed a longitudinal employee experience tracking program (n=5,000+/month), fusing digital workspace telemetry with attitudinal survey data to identify the behavioral indicators of workforce burnout and attrition risk.
  - Engineered scalable qualitative analysis pipelines to process thousands of open-ended employee responses monthly, utilizing thematic coding to extract high-fidelity sentiment signals from unstructured text.
  - Translated complex workforce behavioral data into executive-ready frameworks, directly advising HR and People Operations leadership on targeted retention strategies and interventions to mitigate digital exhaustion across remote workflows.

Portfolio : TerronGraham.com

- **Data Scientist, Core Digital Product Research Team** — New York City, NY
  JP Morgan Chase — *July 2020 - October 2022*
  - Architected a centralized enterprise analytics database unifying behavioral telemetry across 7 distinct digital product lines (800M+ MAU, 6B+ monthly interactions), generating cross-platform behavioral insights that drove a 7% year-over-year improvement in user acquisition.
  - Executed advanced causal inference methodologies to isolate the incremental impact of digital product interventions, successfully separating true behavioral shifts from seasonal noise to accurately measure the ROI of enterprise-wide feature launches.
  - Engineered the foundational A/B testing infrastructure for the digital team, democratizing causal measurement capabilities across dozens of product squads to accelerate data-driven feature releases.
  - Led monthly strategic reviews directly with C-suite leadership (including the Chief Digital Officer), translating complex platform analytics into executive-ready insights that dictated multi-million dollar product investments and enterprise prioritization.
- **Marketing Research Analyst, Informatics Team** — Philadelphia, PA
  Independence Blue Cross — *January 2019 - June 2020*
  - Built reporting systems and conducted quantitative analysis of member behavior patterns using statistical methods, delivering insights that informed strategic recommendations for 2M+ member population.
- **Admissions Analyst, Penn Admissions** — Philadelphia, PA
  University of Pennsylvania — *June 2017 - June 2018*
  - Analyzed data from 75,000+ annual applications using statistical software to support recruitment strategy, providing actionable insights to leadership for enrollment planning and decision-making.

Core Competencies

- **0-1 Product Innovation & Ambiguity Navigation**: Proven track record of leading research in blank-slate environments without established playbooks, driving 0-1 product development from founding a startup's validation frameworks to defining the launch gates for novel AI agents at Meta.
- **Ecosystem-Scale Infrastructure Building**: Architected massive-scale continuous monitoring pipelines, a 100,000+/month global tracking survey at Meta and 800M+ digital telemetry dataset at JPMC.
- **Operationalizing Abstract Constructs**: Pioneered novel measurement frameworks to quantify highly ambiguous, high-stakes psychometric variables, ranging from defining existential user trust metrics at a startup to establishing multi-dimensional behavioral baselines and risk thresholds for 0-1 agentic AI models at Meta.
- **Pioneering Critical User Journeys for Novel Paradigms**: Mapped and optimized complex behavioral funnels for entirely unprecedented user experiences, ranging from architecting cryptographic onboarding flows to defining the core human-AI interaction journeys for 0-1 business messaging agents.

Skills

- **Research & Measurement**: Mixed-Methods Triangulation, Causal Inference & A/B Testing, Telemetry & Log Analysis, Experimental Design, Longitudinal Tracking, Critical User Journey (CUJ) Mapping
- **Technical & Analytics**: SQL, Python, R, Tableau, Adobe Analytics, Qualtrics, Statistical Hypothesis Testing, Massive-Scale Data Analysis, Experimentation Platform Architecture
- **Product Strategy & Governance**: 0-1 Product Validation, Human-AI Interaction Evaluation, Trust & Risk Metrics, Executive-Tier Strategic Advisory, Multi-Sided Marketplace Dynamics, Vendor Operations
